Summary	To pursue my career in reputed field where I can enhance my skills, knowledge and abilities which leads me to contribute the success and growth to the organisation.	
Experience	Bosch Global Technologies Private Limited Associate Software Engineer	Sept 2022 - May 2023 Bangalore, India
	I've worked under Actuators and Drivers department(EAD) where they develops the mobility based technology to make all automatic and connective with systems. And the department at Bosch focuses on the development of engineering solutions and automation technologies for various industrial and manufacturing processes. EAD team works on innovative ideas such as smart automation systems, robotics, and Iot based solutions, ensuring efficiency, precision, and sustainability in Bosch's operations. And my involvement under the EAD department was on "Software Development on Power Window with Anti-pinch System Technology. It is designed to ensure the safety and convenience in vehicles. The power window system allows for automatic raising and lowering of windows through an electric motor by switch operations.	
Education	KL University Electronics and Communication Engineering 8.67 CPA	July 2019 - April 2023 BTech
	Secondary Education Mathematics, Physics and Chemistry 10 GPA	June 2017 - March 2019 Intermediate
	Schooling 10 GPA	June 2016 - April 2017 Schooling
Certifications	Trained and Certified in Java, SQL and Linux Technologies Front Line Media	Feb 2024
	Certified as System Administrator Service Now	July 2022
	Certified in Advanced IOT Analytics with ML Entuple Technologies	April 2022
	Certified as Multi Cloud Networking Associate Aviatrix Certified Engineer	Dec 2021
	Certified in Data Science and Analytics for IOT Entuple Technologies	Aug 2021

Projects	Camera Module Interfacing with RaspberryPi Now a days security plays a vital role in our environment. For that we developed a module responsible in monitoring the actions and responses and delivers the data to user directly. Interfacing a camera module with a Raspberry Pi provides a powerful platform for a variety of image-based projects. As we used Rpi 5.1 to make sure it compatible with the resolutions and the camera module can be used to set up security systems that monitor and detect movement, capture intruders, or even use facial recognition for authentication purposes. Gesture Controller Gaming Setup Playing games on mobile or PC is always fun. But we can make that fun even double with adding gesture control to video game.In my project i built a gesture controller to interact with games using hand movements and gestures instead of traditional input devices like controllers or keyboards. Gesture recognition may not always be precise, leading to occasional input lag so we need the best software which can handle the complexity. The main reason to develop this to develop an physical engagement in gaming, particularly for fitness and action games
Languages	English, Hindi, Telugu, Kannada
Skills	Java, SQL, Linux Operations, HTML, CSS, C Programming Arduino, Rpi, Microsoft Excel, PowerPoint, Creativity, Problem Solving, Decision Making, Multi Tasker Communication Skills and Time Management
Interests	Listening Music, Watching Movies, Playing Games like Cricket, BGMI, Travelling
